## What's new?

### Intellichecks (Performance, Operations, Security) + Trends

BackBox comes with a predefined signature set that can check the health of your systems and keep uniformity and consistency of your device configuration.

In contrary to regular monitoring solutions, BackBox can check things on the application level, what allows for much deeper intelligence, that is not available otherwise.

One set of signatures are performance signatures, that can check things like VPN throughput, number of users connected, connection table usage and so on. BackBox also has a set of predefined signatures for operational checks that can help you comply with policy standards, company standards and auto remediate fixing of nonstandard configuration.

Another set of predefined signatures relates specifically to security checks. This set can help identify security risks like vulnerable protocols that are activated, passwords complexity and CVE vulnerability.

Any measurable data that is taken during these checks can be collected, saved and reviewed over time to identify the device needs; such as upgrades, replacements or just the need to apply configuration changes.

### Network Visualization

Inventory and asset management has been a long-time feature of BackBox. Since BackBox is connecting to the devices regularly and pulling the necessary information, BackBox can provide a dynamic list of devices associated with the network that is automatically populated and updated with each backup performed.

In V.6, BackBox takes this advantage one step forward. While connected to the devices, BackBox grabs network information like routing and IP's, and draws a network map according to it. This map gives users real-time, full visibility of the network, and routes, without the need to use manual drawings or specific limited scanning.

From this map the user can track a route that is taken from one point of the network the second point, see backup statuses of devices, and can even open a terminal window to the devices appearing in the map.

## Access Auditing

Access Management adds the ability for BackBox to connect to remote devices without the need of a 3rd party software. It improves the connection experience by giving SSH, TELNET and RDP access from one console to all your devices connected to BackBox.

With this add-on, BackBox can open any number of terminal windows to multiple remote devices, and even broadcast the same commands to multiple windows, saving users time and the frustration of

Adding this feature to your BackBox install will also give you the ability to save and execute both pre-defined and custom commands. It will also allow any session opened to be audited and searchable too; which means you can search and find specific commands, who executed them, and even watch a video recording of the session.

## CyberArk support

BackBox is now an official CyberArk technical partner. This allows the use of CyberArk PIM to allow BackBox connecting remote devices without the need to save credentials locally.

After installing CyberArk agent on BackBox, the customer will be able to define CyberArk use according to BackBox and CyberArk integration manual.

## Enhancements

### Keep duplicate backups

Added ability to decide if BackBox will keep duplicate text-based configuration or not

### Enforce strong password

Enforcing strong passwords when connecting to BackBox GUI

### Login security properties

Configuring security properties parameters such as login attempts allowed and lock time

### Rollback update

Rollback to previous version after upgrading BackBox, allows to recover from faulty updates

### SSL certificates and Ciphers

Uploading BackBox SSL certificates from the GUI, and controlling which ciphers a user can connect with

### Real-Time cluster

High availability can now be configured in a real time manner instead of the scheduled synchronization

### Sites

Additional fields allowing detail information about site contact , using site logo and limiting access with ACL

### Agent groups

Creating agent groups can help with both redundancy and load balancing

### Agent dashboard

Detailed agent information presented on the agent GUI

### TACACS+

Added the option for connecting to BackBox with TACACS+ server

### Google authenticator

Allowing users login with 2FA using Google authenticator

### User roles

A new list of user roles and what users they are assigned to

### Save file from backup history to file repository

Transfer your backup files directly to BackBox repository

## GUI edit of text-based configuration

Edit your text-based configuration directly from file repository before sending then to remote devices

## Tasks custom reports

Create reports automatically from data collected during tasks execution

## Discovery results to IPAM

Ability to add discovery SNMP results automatically to IPAM

## Description field

Description field allow to add any comment in the device details

## Debug backup run

Stop your running scripts with the ability to execute commands during process

## Reports redesign

Redesigned some of the out of the box reports

## AWS S3 exports

Added an option to export backup files to S3 buckets

## Notification with trap receiver

Added functionality to send notification upon receiving trap from a device with SNMP and SYSLOG and finishing the backup. The notification receiver can get configuration changes to his email

## BackBox CLI access

Added the option to connect to BackBox CLI from BackBox GUI

## Unscheduled Devices report

A new report in the report system to show all unscheduled device in BackBox

## Version 6.24.02

- Added origin IP column in auditing GUI
- Added dynamic resize for Access RDP
- Added active directory Bridge Utility to allow and manage BackBox AD/LDAP integration
- Added checkbox for inclusion/exclusion of file repository in self-backup
- Added new remediation column to intellichecks histories
- Extensive reports modifications
- Added support for allowing multiple syslog servers
- Added replicate and delete option to agents
- Added backup files checksum verification for retrieved backups from AWS Glacier
- Added support for Wallix Bastion authentication templates
- Added option to run scheduled cluster sync by schedule

## Version 6.25.01

- Added timestamp to log files
- Added an option to set low threshold percentage for available disk space in administration
- Added control for size deviation per device and per site
- Added an option for multiple SNMP trap hosts
- Added RSA authentication manager support for login
- Added option for Multiline inventory
- Added auditing record for downloading backup files
- Added UTF-8 support from report name and description

## Version 6.26.01

- Added time ticks for outgoing SNMP traps and source IP for SNMPv3
- Agent file replication button and schedule

## Bug fixes

### Version 6.26.01

- Fixed an issue with replication option for backup pointers
- Changed SNMP monitoring community to clear text
- Fixed an issue with log files transfer
- Fixed an issue with agent groups configuration screen
- Fixed GUI issues in SNMP traps and monitoring screens
- Fixed GUI issue in login screen
- Fixed AWS upgrade issues
- Fixed auditing errors after LDAP users second login
- Fixed an issue with Intellichecks remediation
- 

### Version 6.25.01

- Disabled auto complete in login form
- Minor fixed for scheduled cluster
- Fixed an issue with strong passwords login page
- Fixed an issue with removal of option from Intellicheck signatures when BTN is deleted
- Fixed an issue with mysql permissions and service fails to start
- Fixed an issue with sort by AWS status in backup exports
- Fixed an issue with downloading files with devices assigned to agents' group
- Fixed an issue with display when disabling percentage switch
- Fixed an issue with weekly schedule shows wrong next run date
- Fixed an issue with displaying in size deviation 0
- Fixed an issue with special characters in description of commands
- Disabled download button for access in device history
- Fixed an issue with save button disabled when mandatory fields are empty
- Fixed an issue with configuration of agent groups and sites

## Version 6.24.02

- Fixed an issue with report modification
- Fixes for agent file retrieval
- Fixed an issue with big files download from agent history when pressing download all
- Fixed an issue with sending of history file to repository from agent with no replication
- Fixed an issue with grid state in devices screen
- Fixed an issue with compare files after a backup is finished
- Fixed group/device site change reflection in items-in-jobs
- Fixed an issue with page not refreshing when having an open dialog and changing a site
- Fixed an issue with backup job notification not sent
- Converted timestamp values to date when exporting devices to csv
- Fixed an issue with device details report and notification after Intellichecks job
- Fixed an issue with snmp protocols passwords validation
- Fixed an issue with site is locked for cloned tasks
- Fixed an issue with disappearance of groups from Intellichecks jobs
- Fixed an issue with status icons in device history
- Fixed an issue with endless loading for large amounts of task repository files
- Fixed an issue with Intellichecks history for site users
- Disabled TLSv1 and TCP timestamp response
- Changed email notification for backups exports/retrieved
- Fixed an issue with duplicate groups in Intellichecks jobs
- Allowed snmp/syslog logging on Iptables
- Fixed deletion of backup files on management when deleting device on agent

## Version: 6.22.07

- Fixed an issue with trail log css in intellicheck job history
- Fixed an issue editing authentication template
- Added results.log tab to trail log
- Deleted some residue files after downloading
- Fixed an issue with encrypted network info files
- TCP SACK Panic attack fix – fix issued according to Red Hat resolve option #1:  
<https://access.redhat.com/security/vulnerabilities/tcpsack>

## Version: 6.22.06

- Fixed an issue with font size when sorting widgets in dashboard
- Added clipboard integration to access controllers
- Fixed a timeout issues in actions between management and agent
- Fixed an issue with report mail recipients
- Fixed an issue with intellicheck signature group conf dialog
- Added copy outside of local terminal
- Fixed an issue with tasks jobs in site
- Fixed an issue with disk space parsing for /data/backups
- Fixed some issues with cluster sync report
- Fixed issues with nfs configuration from smb 4
- Fixed an issue with comparison report
- Limit the number of open access terminals to 5
- Added information to agent GUI
- Fixed an issue with encryption of tasks dynamic fields
- Fix for unscheduled devices report
- Changed protocol name in backup exports from FTP to SFTP
- Blocked descriptive http method
- Fixed an issue with network info and database population on agent
- Disabled local terminal access
- Added amount of devices column to backup job and inteliicheck job
- Updated backup status in case of successful replication
- Added button for adding selected IP segment address in IPAM
- Fixed issues with cluster sync failure
- Fixed an issue with BTN edit
- Added description column in device picker table
- Fixed an issue with CheckPoint license report
- Added option to add port number in IPv4 filed in syslog server
- Fixed sorting of some tables
- MariaDB upgraded to version 5.5.64 because of security vulnerabilities
- CIFS and NFS exports will not automatically convert backslashes
- Made some improvements in export mechanism
- Added number of selected rows to commands table
- fixed an issue with replication and comparison
- added default values of timeout and result options for new commands
- prevented deletion of a backup job without un-scheduling it first
- fixed CyberArk logic
- allow auto redirect of port 80 to 443

- fixed file replication value in download screen
- added option to control size deviation

## Version: 6.21.08

- Fixed an issue with keep duplicate and identical marking
- Updated self restore operation
- Enabled special chars in SMTP authentication password
- Fixed an issue with restoring from a backup pointer
- Fixed an issue with SNMP v3 credential in discovery scan
- Fixed encryption issue in tasks
- Fixed an issue with schedules and sites
- Access feature will always use port used in device details. Added the option to change it
- Added failure logging for devices which were failed to be added
- Fixed an issue with tasks dynamic field order
- Fixed regex check in file comparison
- Fixed an issue with pop up window
- Fixed licensing issue calculation after multiple edit of devices
- Fixed an issue with SCP and file streams
- Fixed an issue with deletion of schedules and notifications
- Fixed an issue with download comparison PDF
- Fixed an issue with schedule edit
- Fixed an issue with line renumbering in comparison filters
- Fixed an issue with changing tasks in task job
- Fixed an issue with Intellichecks job run once
- Fixed an issue with terminal window
- Fixed 404 message with correct support email
- Added cluster sync report
- Added sort to comparison report
- Changed date format for cluster sync
- Added additional security constraint to block descriptive http methods
- Added comparison report content to notification email body

## Version: 6.21.05

- Added specific error messages when add device internal command fails
- Fixed an issue with multiple device edit

- Fixed an issue with agent replication status
- Fixed an issue with mount cifs for samba4
- Added file permissions to task commands import/export
- Fixed an issue with inability to edit files with white space in repository
- Fixed an issue with description field not cloning
- Fixed an issue with uploading binary files to repository
- Fixed an issue with compare exception ignore when lines are unchanged
- Removed default public SNMP community
- Fixed API request getAllBackupJobs to display relevant information
- Added download button in Task File Repository table
- Fixed an issue with AWS retrieve button
- Added files for the self-backup
- Fixed an issue with site users and intellichecks signatures
- Added support for AWS S3 exports
- Fixed some issue with special characters and task/intellicheck name
- Added some internal commands for better control in SMB
- Added support for special characters in the encrypted BackBox self-backup passphrase
- Fixed an issue with auditing
- Added compare result files to trap receiver
- Fixed icon of suspect status in backup job history
- Fixed add, edit and delete actions for site users
- Secured Backbox against Session overflowing attacks - Backbox now has an extended custom implementation of a Tomcat session manager
- Fixed an issue with backup pointers
- Fixed agent status change notification, added 10 seconds delay
- added info to general log when running Device Disk Usage report
- Fixed error in IntelliChecks queue
- Fixed compare failure between an encrypted and unencrypted backups files
- Fixed an issue with trail-log window in network map
- Fixed an issue with disk space information on widget with NFS mount

## Version: 6.20.00

- Fixed an issue with reports and special characters
- Fixed an issue with SNMP trap receiver
- Added popup window about recording session in access
- Added IE support for reports
- Added mechanism for prevention of upgrading management before all connecte3d agents are upgraded
- Fixed problem with the information in cluster log

- Fixed an issue with API calls GET /devices
- Added hiding of banner and MOTD on debug mode
- Access rules must now be unique entries in the OS IP tables. Sites and users can now only be limited to access rules which allow https connections
- Fixed an issue with lockout from BackBox when modifying access rules
- Fixed an issue which caused archive to display as downloading forever, after the download has failed to initialize
- Fixed an issue with admin security properties changing after reboot
- Fixed an issue with Firefox and first-time wizard
- Fixed an issue with checksum calculation on agent
- Added support for Danish characters
- Fixed an issue with administration validation for CyberArk on server side
- Added new help documentation
- Added option for site selection by name and search box in all elements
- Fixed an issue with multiple mail notification receivers
- Fixed an issue with retries in backup failures
- Added information for Syslog/SNMP trap notifications
- Changed in some places exporting of csv report instead of PDF and Excel
- Fixed wrong CPU percentage in widget
- Upgraded SMB client to latest version
- Added description field to devices multiple edit
- Added direct tracking mode for AWS retrievals
- Fixed an issue with reports schedules
- Added mechanism for protecting against brute force
- Fixed some GUI issues
- Fixed issues in getlastbackup internal command

## Version: 6.19.02

- Fixed an issue with group and site names not visible in backup exports picker
- Fixed an issue with reconnection balance in Intellichecks
- Changed Intellichecks reports
- Fixed intellichecks job notifications
- Fixed an issue with access rules addition and no ports specified
- Added display of engine ID from snmpv3 traps
- Fixed an issue with login security properties saving
- Fixed an issue with adding wrong backup files to repository
- Fixed SNMP trap receiver message handling

- Fixed Intellicheck signatures export
- Fixed an issue with IP tables rules and agents
- Fixed limit on agent numbers
- Fixed an issue with html attached reports and characters handling
- Fixed an issue with server IP duplication in device config
- Fixed wrong CPU widget percentage
- Fixed an issue with download all button
- Fixed an issue with email title on Intellicheck job notification
- Fixed an issue with sequential task job execution
- Fixed an issue with LDAP over SSL due to <https://www.oracle.com/technetwork/java/javase/8u181-relnotes-4479407.html>

## Version: 6.17.03

- Fixed issues with LDAP users
- Updates OS users' path in database
- Fixed issues with backup history deletion by retention policy
- Added case sensitive matching for vsftp OS user removal
- Fixed an issue with download all for device backup files
- Fixed an issue with config documentation during upgrades
- Ip tables improvement
- Solved an issue which caused a bottleneck in AWS backup retrievals
- Added removing of selected objects once filter is used
- Set backup run status to suspect when there is not enough available disk space on management for replicating backup files from agent
- Fixed file compatibility for content editing in task file repository
- fixed retention policy values after upgrade from v5
- Fixed issues with settings administration properties fill

## Script Changes

### Version 6.26.01

- Added new version: Fortinet -> FortiSandbox -> Version 3.1.x -> cURL
- Added new product: F5 -> BigIQ -> All -> SSH (TMOS)
- Added new backup option : Cisco Systems Inc -> Prime -> Infrastructure 3.3 and above -> SSH/SFTP
- Added new task: Fortinet -> Fortigate -> Add address objects from file and associate with an interface
- Added new task: Imperva -> Password change
- Added new task : CheckPoint -> Add route
- Added new Intellicheck : F5 -> BIG IP ->SSH (TMOS) -> SSL routines
- Added new Intellicheck : F5 -> BIG IP ->SSH (TMOS) -> Memory leak
- Added new Intellicheck : Cisco -> Router/Switch -> Proxy ARP

### Version 6.25.01

- Added new product : Blue Coat -> Malware Analysis -> 4.x -> HTTPS
- Added new product : CheckPoint -> Multiblade Chassis Systems -> R77 And Above -> SSH Full – individual files
- Added new product : CheckPoint -> Multiblade Chassis Systems -> R77 And Above -> SSH Full – single files
- Added new Intellicheck : Check Point -> R77.xx Provider -> Check VPN Certificates Expiration for all domains
- Added new task : Check Point --> CPUSE Agent Installation
- Added new Intellicheck : Check Point -> Check if link is down
- Added new Intellicheck : Check Point --> Check that all next hopes are accessible
- Added new task : Checkpoint -> Gateway Upgrade from R77.30 to R80.x
- Added new task : Check Point -> R77.x Provider-1 -> Create an object and add it existing group
- Added new task : Cisco -> CDP Neighbors
- Added new vendor: Opswat -> MetaDefender Kiosk -> All -> cURL

## Version 6.24.02

- Added new product: Symmetricom -> SSU\_2000 -> All -> Telnet / TFTP
- Added new Intellicheck: Checkpoint -> API status
- Added new vendor: Opswat -> MetaDefender Core -> All -> cURL
- Added new Intellicheck: Cisco -> ASA -> Certificate Check
- Added new Intellicheck: Fortinet -> FortiGate -> Attack Blocked
- Added new Intellicheck: Fortinet -> FortiGate -> CPU Performance
- Added new Intellicheck: Fortinet -> FortiGate -> HA Configuration Changed
- Added new Intellicheck: Fortinet -> FortiGate -> Hard Disk Health
- Added new Intellicheck: Fortinet -> FortiGate -> License Status
- Added new Intellicheck: Fortinet -> FortiGate -> Memory threshold
- Added new Intellicheck: Fortinet -> FortiGate -> NTP Status
- Added new Intellicheck: Fortinet -> FortiGate -> Operation Mode Changed
- Added new Intellicheck: Fortinet -> FortiGate -> Password Policy
- Added new Intellicheck: Fortinet -> FortiGate -> Physical Interfaces
- Added new Intellicheck: Fortinet -> FortiGate -> Virus Caught
- Added new Intellicheck: Fortinet -> FortiGate -> Critical Services Down
- Added new Intellicheck: Fortinet -> FortiGate -> Confirm connectivity to the FortiManager
- Added new Intellicheck: Fortinet -> FortiGate -> Confirm Telnet is Disabled
- Added new Intellicheck: Fortinet -> FortiGate -> Check which Hostname configured
- Added new Intellicheck: Fortinet -> FortiGate -> Check if Banner is configured
- Added new Intellicheck: Fortinet -> FortiGate -> Confirm SNMPv3 is active
- Added new Intellicheck: Fortinet -> FortiGate -> Check for SNMP v1 and v2
- Added new Intellicheck: Fortinet -> FortiGate -> SNMP Agent Status
- Added new Intellicheck: Fortinet -> FortiGate -> Uptime below threshold
- Added new Intellicheck: Fortinet -> FortiGate -> Confirm Web Protocol HTTPS only
- Added new Intellicheck: Fortinet -> FortiGate -> Confirm Password Complexity
- Added new Intellicheck: Fortinet -> FortiGate -> Get User List
- Added new Intellicheck: Check Point -> Uptime below threshold
- Added new Intellicheck: Palo Alto -> Uptime below threshold
- Added new Intellicheck: Palo Alto -> Check which Hostname is configured
- Added new Intellicheck: Palo Alto -> Check if HTTP is activated or disabled
- Added new Intellicheck: F5 BiG-IP -> Uptime
- Added new Intellicheck: Citrix -> NetScaler -> Uptime
- Added new Intellicheck: Citrix -> NetScaler -> Primary NTP Server
- Added new Intellicheck: Citrix -> NetScaler -> Secondary NTP Server
- Added new Intellicheck: Citrix -> NetScaler -> Ensure RADIUS Usage
- Added new Intellicheck: Citrix -> NetScaler -> Check timezone
- Added new Intellicheck: Citrix -> NetScaler -> SSH Session Inactivity Timeout
- Added new Intellicheck: Citrix -> NetScaler -> Primary DNS Server
- Added new Intellicheck: Citrix -> NetScaler -> Secondary DNS Server

- Added new Intellicheck: Windows LDAP -> Check for LDAP Configuration change
- Added new Intellicheck: Windows LDAP -> Check if users were added/removed from a group
- Added new Intellicheck: 3COM -> Switch -> Mem Usage
- Added new Intellicheck: 3COM -> Switch -> Temperature
- Added new Intellicheck: 3COM -> Switch -> Check Telnet Status
- Added new Vendor: IPswitch -> WhatsUpGold -> All -> SMBv2
- Added new version: Cisco -> Switch -> Supervisor Engine -> SSH
- Added new inventory: Aruba -> Security Switch->All->SSH
- Added new product: Ruckus -> ICX -> All -> SSH

## Version 6.21.08

- Added new task: CheckPoint Gateway -> Add Vlan
- Added new task: Fortigate -> Add address objects from file and associate with interfaces
- Added new task: Bluecoat CAS -> Upgrade firmware v2.x and above
- Added new task: CheckPoint -> Major upgrade on cluster members R77.30 and up
- Added new product: BlueCoat -> Reporter-> All -> SSH/SCP
- Added new network script: Cisco -> Nexus -> All -> SSH

## Version 6.21.05

- Added new backup option: HP -> Procurve -> All -> SSH-TFTP
- Added new vendor: Accedian -> Network Performance-> All -> FTP
- Fixed some issues with : Checkpoint -> Gateway -> R77 -> Snapshot
- Added new version : Dell -> PowerConnect -> N2000 -> SSH
- Added new version : D-Link -> Switch -> DGS-1210 > Telnet/TFTP
- Added new product : Kemp -> VLM Series -> 7.x -> cURL (Authorization basic)
- Added new product : Cisco -> DCNM -> 11.x.x and above -> SSH (Lan Fabric)
- Added new option : Brocade -> DS-5100 and SonicWall -> NSA 4500 -> SSH
- Added new option : Arbor -> Peakflow -> All -> SSH-SCP and SSH-SCP + sp.conf
- Added new device : Cisco Systems Inc -> ACI APIC -> All -> SSH/FTP
- Added new vendor : Extrahop -> ECA -> 7.5 and above -> API
- Added new version : Fortinet -> FortiManager -> 6.x and above -> HTTPS and SSH/SFTP
- Added new product : Check Point -> 1400 -> All -> SSH-SCP

## Version 6.19.02

- Changes to script : Fortinet -> FortiAnalyzer -> Version 5 -> ssh/ftp + ssh/sftp
- Changes to script : Cisco -> UCS -> All -> SSH/SCP + SSH/FTP
- Added new product: Fortinet -> FortiSwitch -> All -> SSH, ssh/ftp, ssh/tftp
- Added new option : Access Layers -> Portnox -> 1.x and above -> Smb2 Remote DB
- Added new version : Blue Coat -> Management Center -> V 2.0.x.x -> SSH/SCP
- Added new Options : Vmware -> Vcenter Appliance -> Version 6.x and above->HTTPS /FTP/FTPS/SCP (API)
  
- Added new product : Extreme Networks -> VSP Switch -> All -> SSH
- Added new product : Cisco -> Telepresence -> SX -> cURL
- Added new product : Cisco -> TelePresence -> Webex Room Kit -> cURL
- Added new option : HP -> Office Connect Switch -> 1910 -> cURL (Captcha)
- Added new product : StealthWatch -> Management Center -> 2010 and above -> HTTPS

## Version: 6.17.03

- Added new Vendor MicroSens -> Switch -> All -> SSH/FTP
- Added new Vendor MicroSens -> Switch -> All -> SSH/TFTP
- Added new Vendor Hirschmann -> Switch -> All -> Telnet
- Added new Vendor Hirschman -> Switch -> All -> Telnet/TFTP
- Added new Vendor Infinidat-> Infinibox-> All -> cURL
- Added new backup option McAfee -> ePO -> 4.x and above -> SMB2 (No Sql Dump)
- Added new vendor Microsemi (previously known as Symmetricom) -> SyncServer -> S600 -> cURL
